■ Monthly Visual Inspection

Complete these tasks each month to catch issues early. Time required: 30-45 minutes.

- ☐ **Walk the Roof Surface**
Check for ponding water, debris, displaced materials
- ☐ **Inspect Membrane Condition**
Look for cracks, blisters, wrinkles, or discoloration
- ☐ **Check All Penetrations**
Examine seals around HVAC, vents, pipes, skylights
- ☐ **Clear Drains & Scuppers**
Remove leaves, debris; ensure water flows freely
- ☐ **Examine Edge Details**
Check parapet walls, coping, edge metal condition

■ PRO TIPS

- Inspect after every major storm, even if it's not your scheduled month
- Take photos each month for comparison—helps identify gradual changes
- Use a consistent route so you don't miss any areas
- Keep a dedicated pair of soft-soled shoes for roof access

■ Quarterly Maintenance Tasks

Perform these deeper maintenance tasks every 3 months (Jan, Apr, Jul, Oct recommended).

- ☐ **Deep Clean Gutters & Downspouts**
Remove all debris, flush with water, check for proper flow and no leaks
- ☐ **Inspect & Clean Drains**
Remove drain covers, clear any buildup, ensure strainers are intact
- ☐ **Check HVAC Equipment Stands**
Verify stands are level, secure, and not causing membrane damage
- ☐ **Test Emergency Overflow Drains**
Ensure secondary drainage systems function properly
- ☐ **Trim Overhanging Vegetation**
Cut back any branches within 6 feet of the roof surface
- ☐ **Inspect Caulk & Sealants**
Check all exposed sealants for cracking, peeling, or separation
- ☐ **Review Roof Access Points**
Ensure hatches, ladders, and safety equipment are in good condition

■ ■ Seasonal Preparation

❄ ■ Winter Preparation

- Clear all debris before freeze
- Check/repair drainage systems
- Inspect flashing/seals for gaps
- Verify emergency equipment
- Stock snow removal tools
- Review ice dam risk areas
- Document pre-winter condition

■ ■ Summer Preparation

- Check UV damage on membrane
- Inspect expansion joints
- Clean HVAC condensate lines
- Verify reflective coatings
- Check thermal movement
- Inspect for heat blistering
- Ensure ventilation is clear

■ Spring Recovery

- Assess winter damage
- Clear accumulated debris
- Deep clean all drains
- Schedule professional inspection
- Address any leak reports

■ Fall Prep

- Full system inspection
- Gutter cleaning (heavy)
- Seal any minor cracks
- Check heating systems
- Stock emergency supplies

■ Annual Professional Inspection

Schedule a professional inspection annually. Here's what should be covered:

Professional Inspection Should Include:

- Complete membrane assessment (core cuts if needed)
- Infrared moisture scanning
- Detailed flashing inspection
- Structural drainage evaluation
- HVAC curb and equipment pad inspection
- Warranty compliance verification
- Roof life expectancy assessment
- Written report with photos and recommendations

What to Expect From Your Inspector

- Arrive with proper safety equipment and insurance documentation
- Spend 1-3 hours depending on roof size and complexity
- Provide detailed written report within 7 days
- Include prioritized recommendations (immediate, near-term, long-term)
- Offer to review findings and answer questions

■ Emergency Response Guide

If You Discover Roof Damage:

1. Assess Immediate Safety

Do NOT access the roof if there's active weather or visible structural damage. Evacuate affected areas if needed.

2. Document Everything

Take photos/video of damage from safe vantage points. Note date, time, and weather conditions.

3. Protect Interior

Move valuable equipment, cover items with plastic. Place containers under active leaks.

4. Contact Your Roofer

Call 630-655-8256 immediately. We offer emergency response within 24-48 hours.

5. Notify Insurance

Report potential claims early. Your documentation will be critical.

6. Secure the Area

Prevent unauthorized roof access until professional assessment is complete.
